Ad Hoc Fundamentals

- This guide is only a training tool and should be used as such. When building your report, you may have other data requirements.
- This guide also shows you how to eliminate duplicate rows of data.
- Practice is the key to success.

Ad Hoc Fundamentals

- PeopleSoft Query allows you to access pre-joined NSIPS tables for active or reserve personnel – depending on your security roles.
- The NSIPS data construct – table and field names – is located in the NSIPS Online Help system.

Ad Hoc Fundamentals

- The following slides represent building an Ad Hoc report for recent gains.
- There are several steps involved in building reports that deal with Job, Contract Data, and Employment table information
  - These tables often contain more than one row of information

Ad Hoc Fundamentals

- The tables containing multiple rows of information are the primary reason you may see many rows of information on the same person.
- This presentation will help you to pull the latest row of information thereby presenting only one row of data.

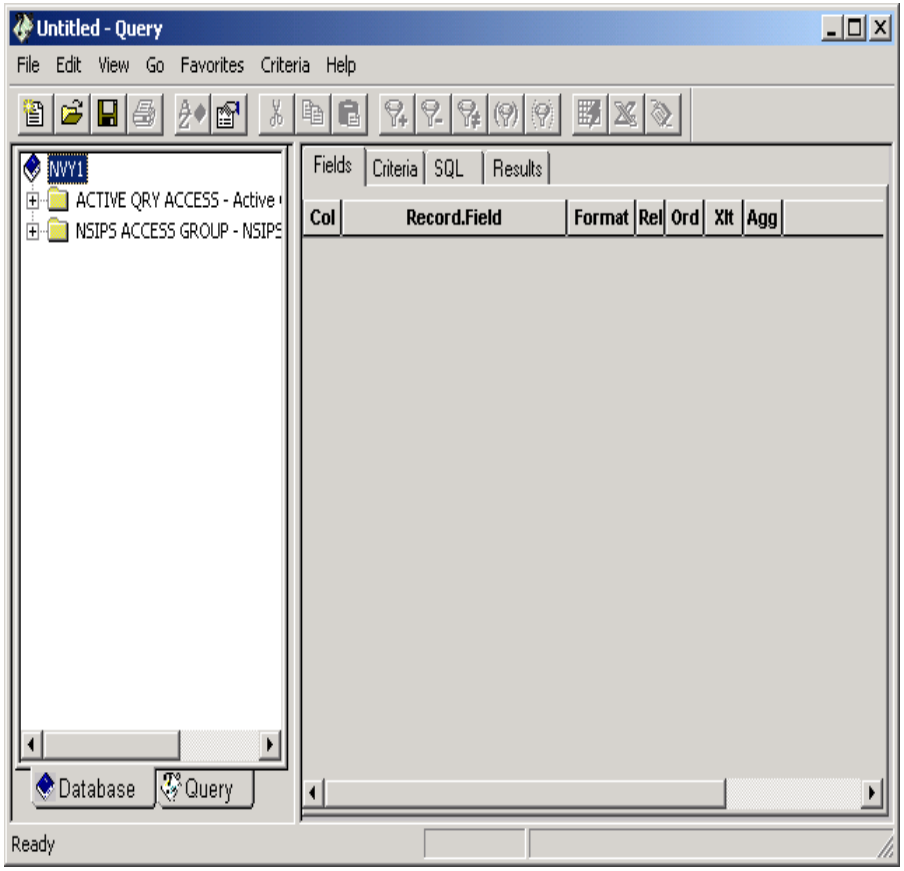
Ad Hoc Fundamentals

- If you run a query and notice there are multiple rows of information. Take a look at the report and determine where the data differences are. This will tell you what table is providing the multiple rows of information and then you can build the criteria statement to eliminate the additional rows.

Ad Hoc Fundamentals

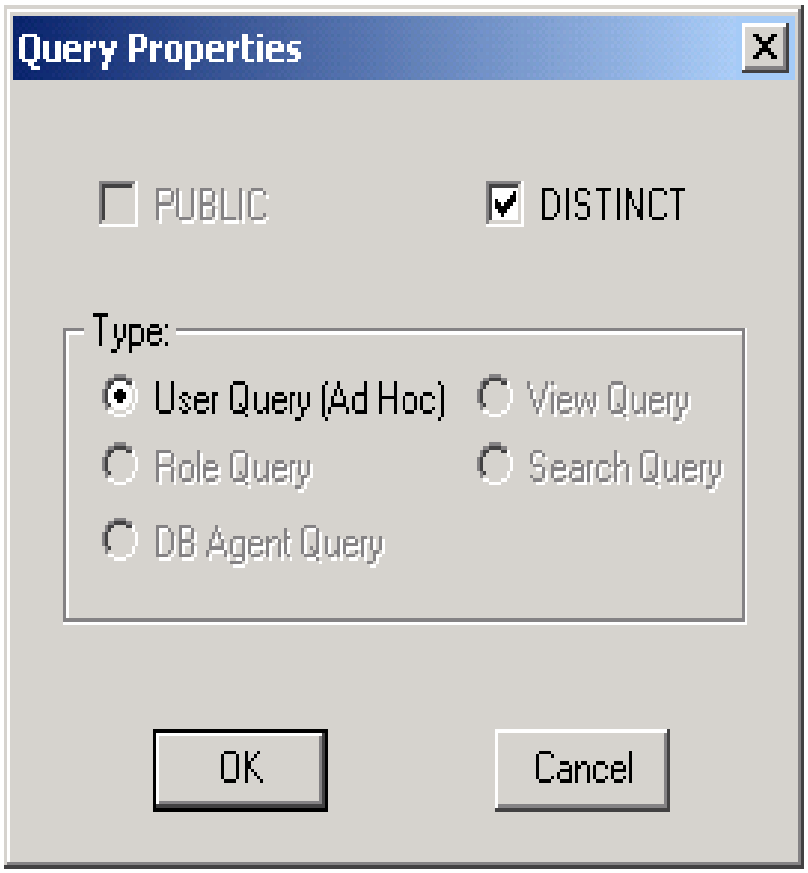
- Some criteria examples are:
  - Last Effective Date – Last Effective Sequence for JOB
  - Max Contract_End_Date for Contract Data
  - Empl_Rcd# = 0 for Employment

AdHoc Gains



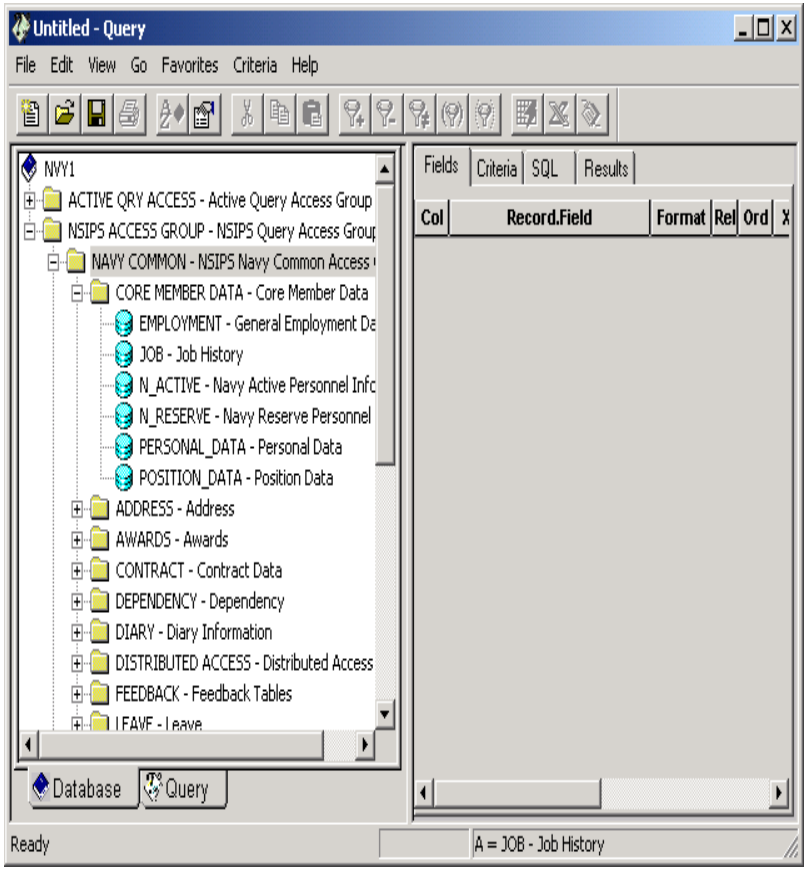
- Select PeopleTools > Query

Result



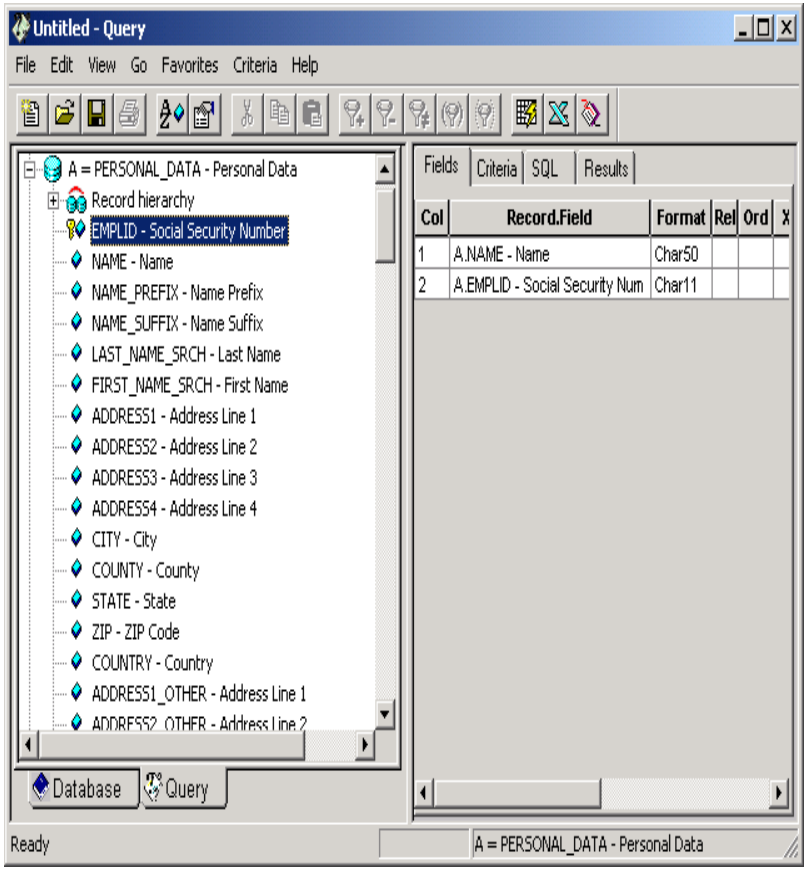
- > Select File > Properties > Check DISTINCT

Result



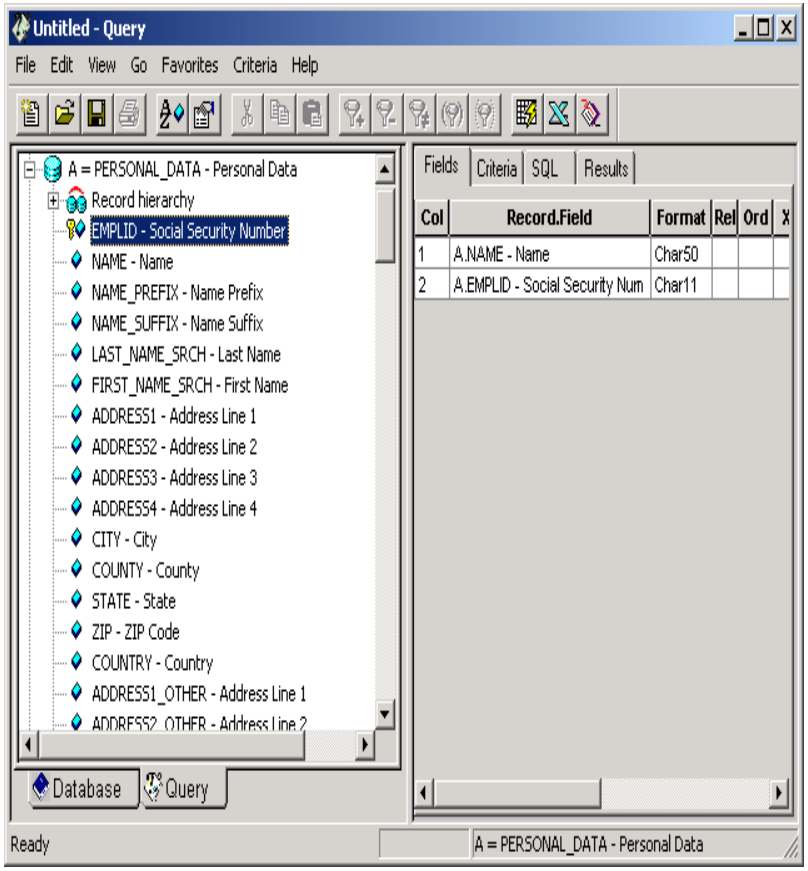
- > Select NSIPS Access Group
- > Select NAVY Common
- > Select CORE Member Data

Result



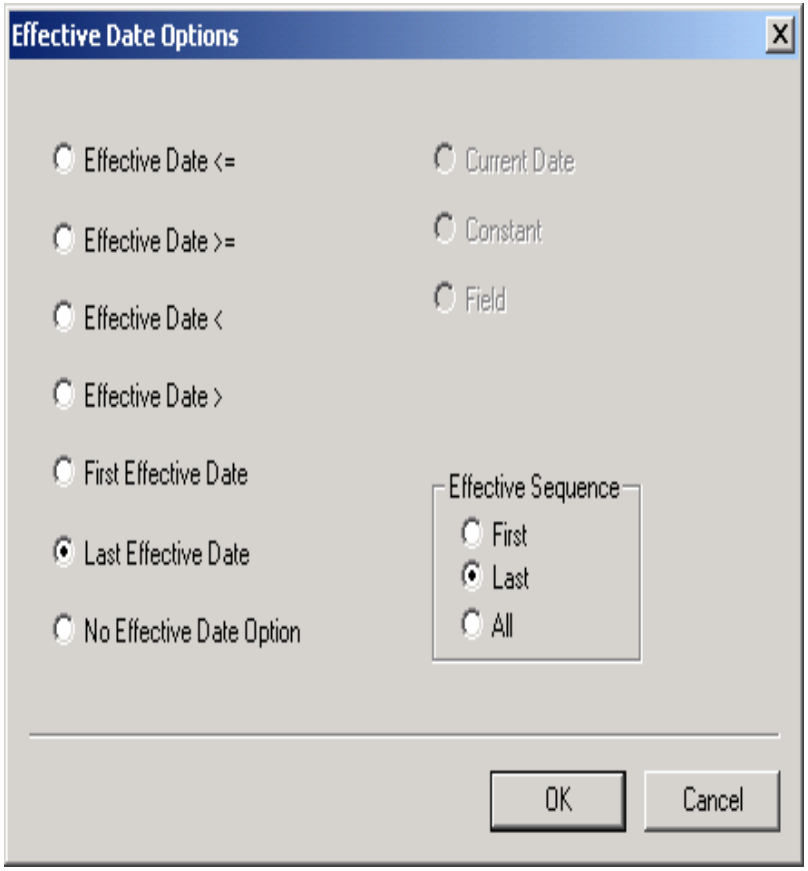
- > Double Click Personal Data
- > Select Name
- > Select Emplid

Result



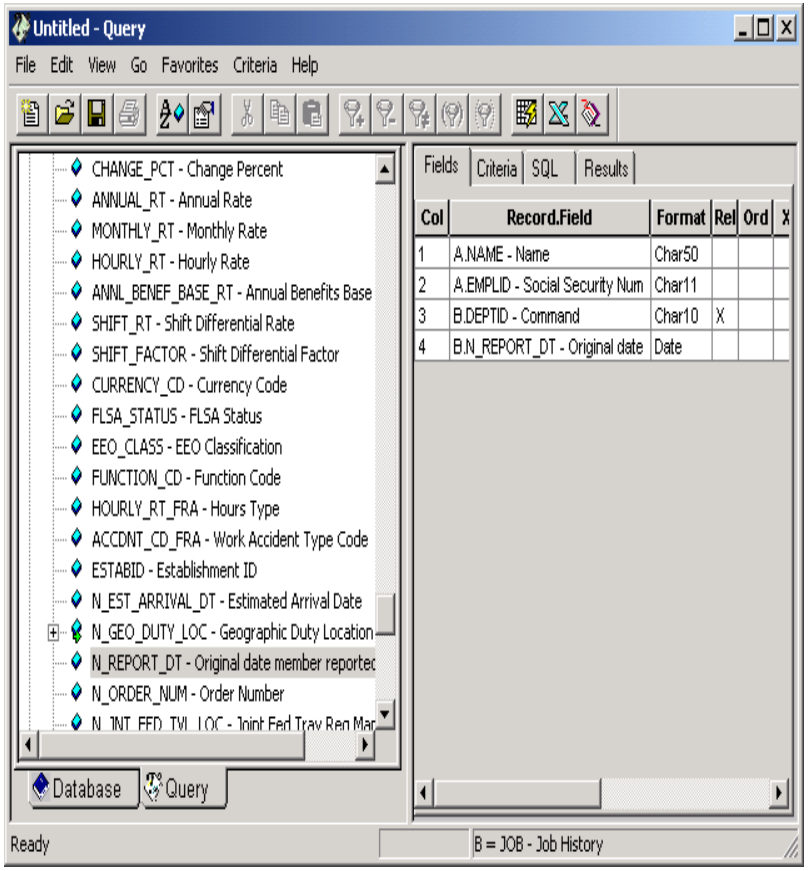
- > Select Database Tab (lower left)
- > Double Click Job
- You will see the Effective Date Option Panel

Result



- > Select Last Effective Date
- > Select Last Effective Sequence
- >Select OK
- This ensures the latest row of job data is displayed.

Result



- > Select DEPTID
- > Select N_REPORT_DATE

Result

D = CONTRACT_DATA - Contract Data

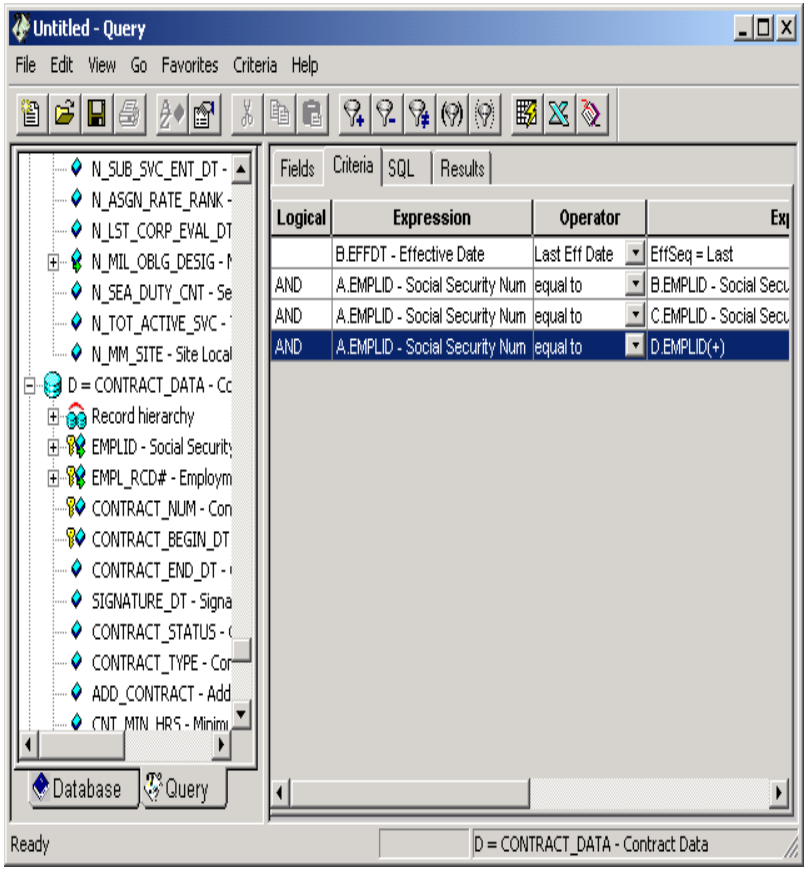
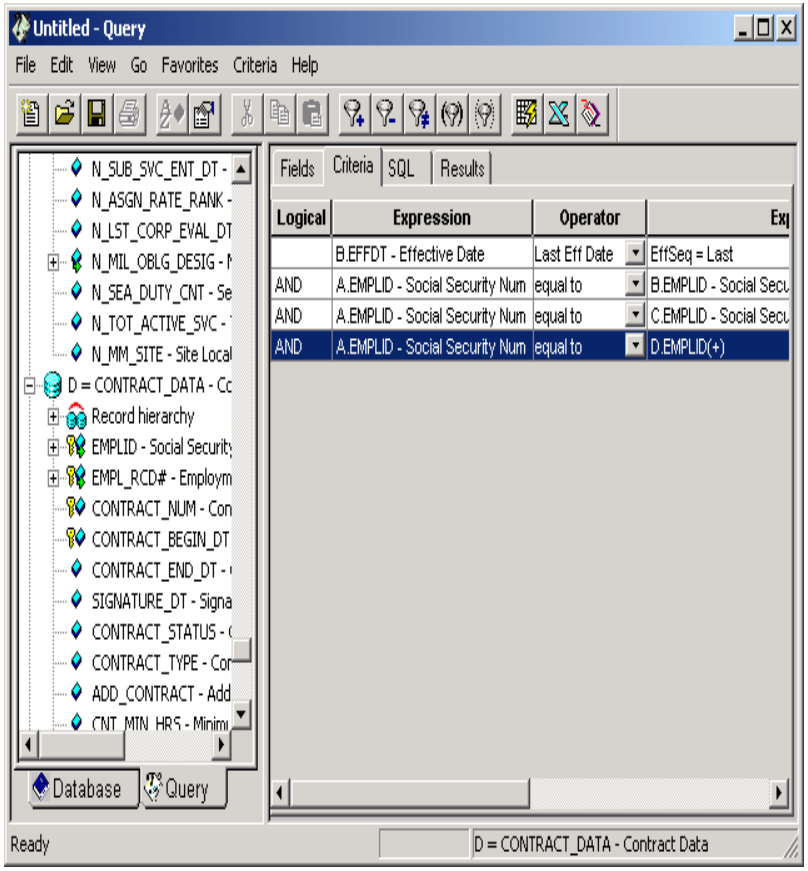
- > Select Expression
- > Enter D.EMPLID(+)
- > Click OK

Result



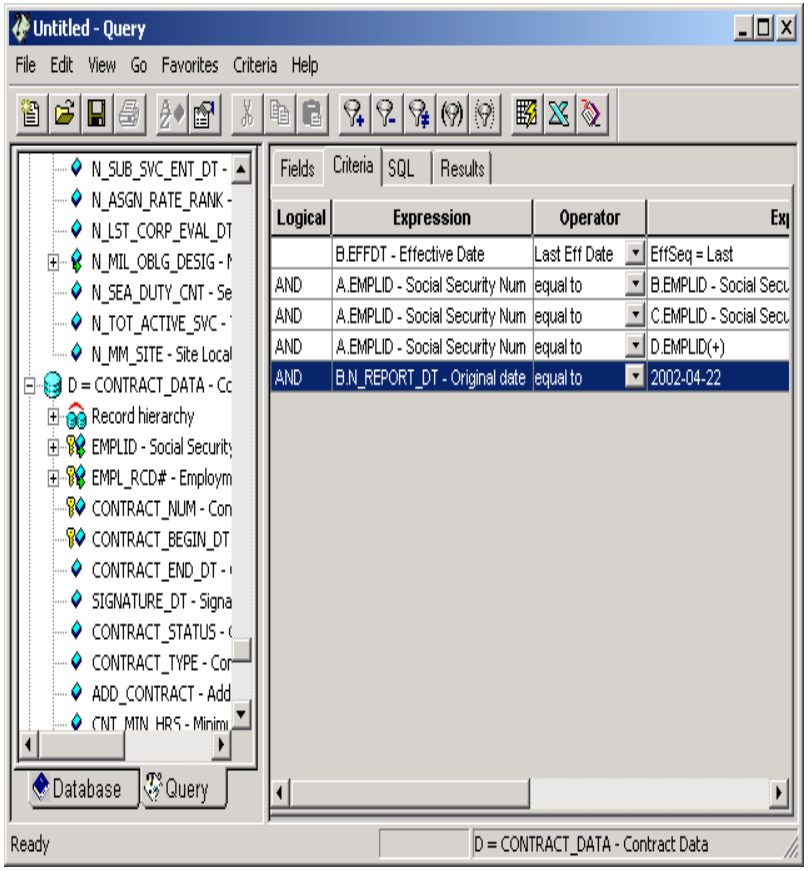
- You just completed an “outer join.” This is required when you pull data from one table that will NOT have data on a second table. In this case the Job and Contract Data Tables.

Result



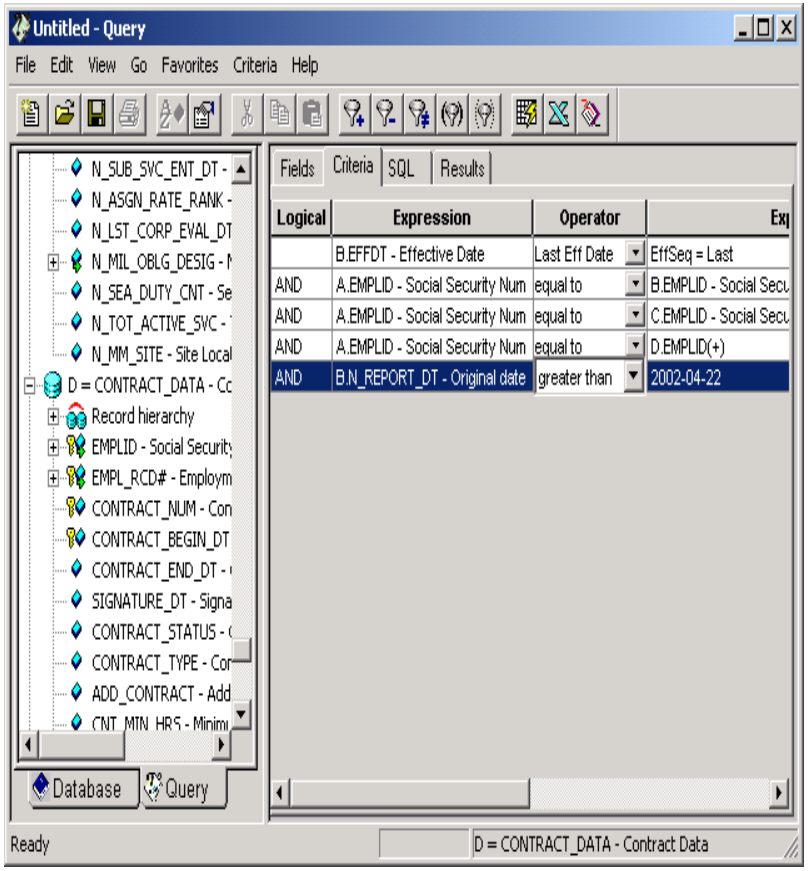
- We need all enlisted and officers. The Contract Data Table does not have data for officers – therefore an outer join was required.

Result



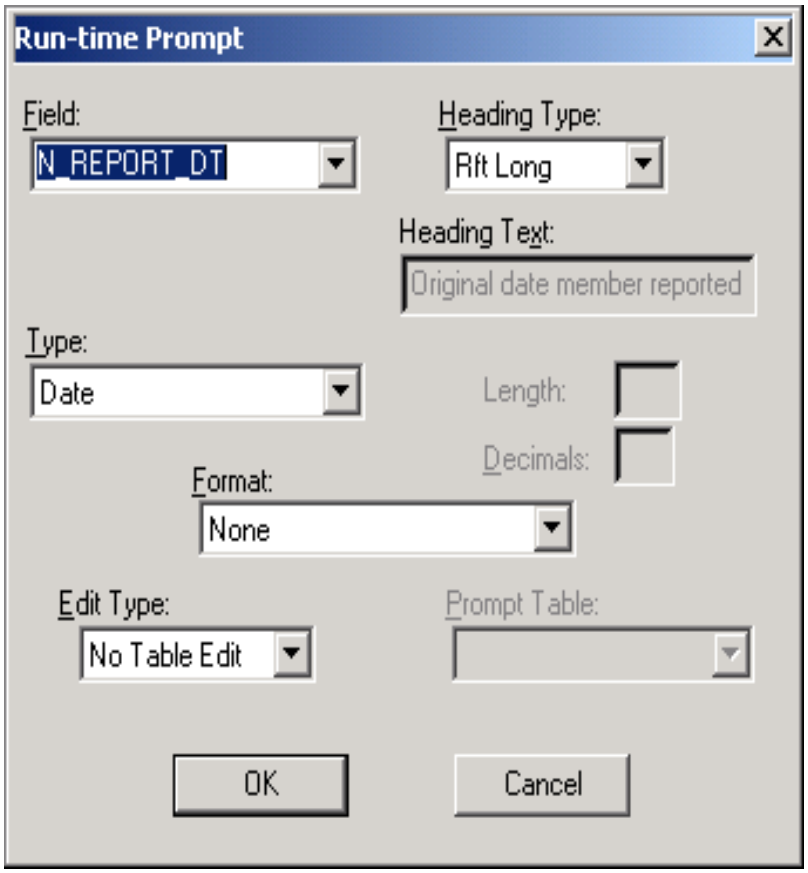
- Now – we will set up a prompt for the user to enter the Report Date.
- > Select the Funnel+ button
- > Select JOB and N_REPORT_DT fields.

Result



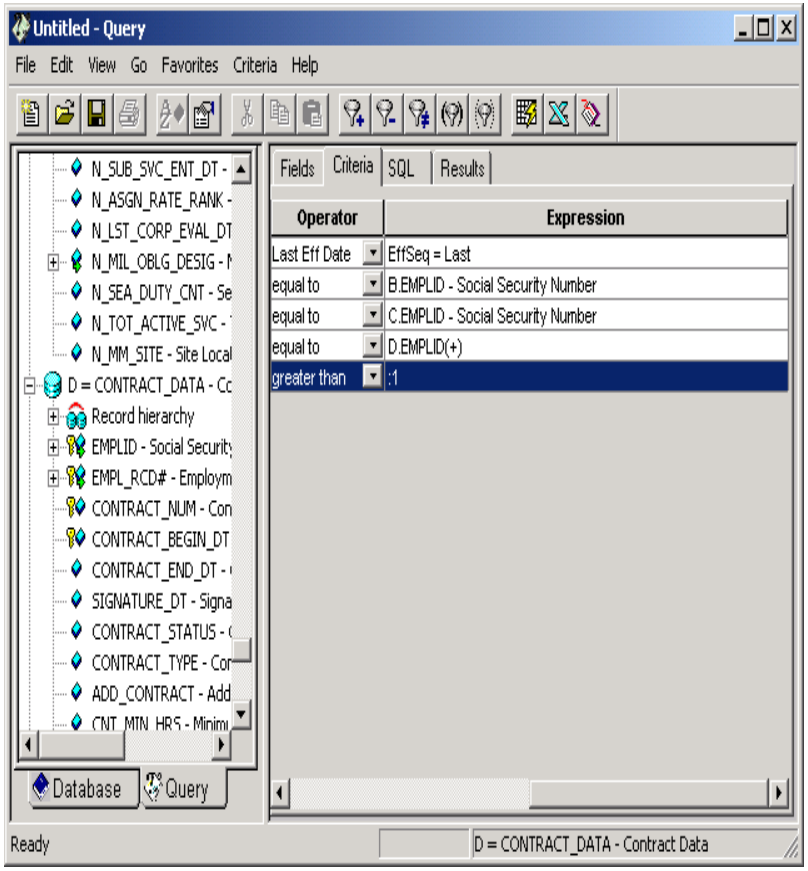
- > Select Down arrow under the Operator column and select the greater than field

Result



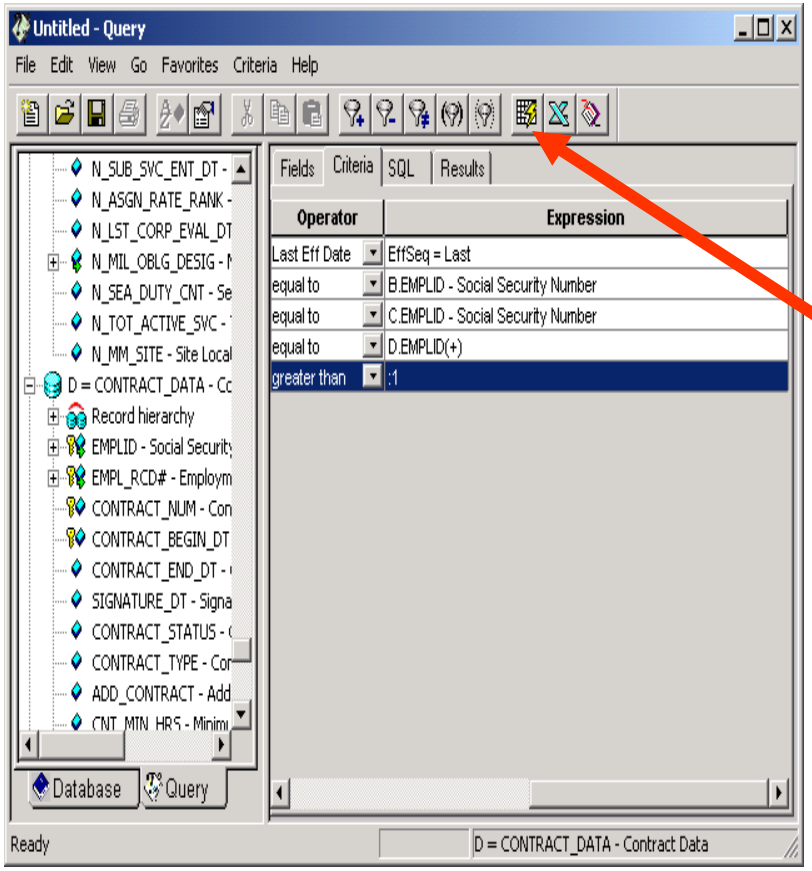
- > Right Click on Right Expression Column and select Prompt field
- > Select OK

Result



- > Now the system will prompt you for a date before the query is executed.

Result



- > Now it’s time to run your query
- > Press the Yellow Lightening Bolt Button

Result

- > You will be prompted to enter a date. Press the down arrow and select your desired date.
- By setting up a prompt, you will get results based on your date selection criteria. Without prompt will widen your selection.
